

ABSTRACT

A wireless handset may connect to a media server in order to receive streaming media content. The wireless handset may send the media server one or more indications of the wireless handset's presentation capabilities. In response, the media server may
5 send the wireless handset a list of media content and transmission modes, and the list of media content and transmission modes may be tailored, at least in part, based on the presentation capabilities of the wireless handset. A user of the wireless handset may then select from the list of media content, and the media server may stream the media content to the wireless handset using the selected transmission mode.
